Serves Klternadas

$$\int = \sum_{m\geq 0} (-1)^m \alpha_m : E_3 :: \sum_{m\geq 1} \frac{(-1)^{m+1}}{m} = \frac{1}{1} - \frac{1}{2} + \frac{1}{3} - \frac{1}{4} + \dots$$

Para calcular S se pade visar el critério de Leibniz que dice que:

Dado $\sum (-1)^{m+1} \alpha_m$, si $|\alpha_m|$ converge y

las sumas pares e empares se pueden agrupas

g también convergen $\frac{-s_{w1}}{s_{w1}}$ (pares)

Enthoses $S = \Delta_1 + \Delta_2 \cdot ... \cdot \Delta_N + \Delta_{N+1} + ... \rightarrow S \leq S_N$ $E_N = |S - S_N| = \left| \sum_{n \geq N+1} \Delta_n \right| \leq |\Delta_{N+1}| = \alpha_{m+1}$

$$O S = \sum_{n \ge 1} \frac{(-1)^{m+1}}{n} \quad \text{con an even de } 10^{-3}$$

$$A_{m} = \frac{(-1)^{m+1}}{n}; \quad \alpha_{m} = \frac{1}{m}$$

$$E_{N} = |S - S_{N}| \le \alpha_{N+1} = \frac{1}{N+1}$$

$$Si \cdot 10^{-3} = \frac{1}{N+1} \iff \frac{N+1}{10^{3}} = 1 \iff N+1 = 10^{3} \iff N = 999$$

$$Pon \text{ factor, } N \ge 999, \quad y \subseteq S_{999}$$

Energy Scan 10 termines y calculated and
$$E_{10} = |S - S_{10}| \le Q_{11} = \frac{1}{11} = 0.09 \times 0.1 = 10^{-1}$$

$$S \le S_{10} = \frac{1}{1} - \frac{1}{2} + \frac{1}{3} - \frac{1}{4} + \frac{1}{5} - \frac{1}{6} + \frac{1}{8} - \frac{1}{9} + \frac{1}{10} - \frac{1}{11} = 0.00$$
